Study Puts Reznick Group's Energy Practice in National Media Spotlight

The Bloomberg New Energy Finance study commissioned by Reznick Group "[The return – and returns – of tax equity for US renewable projects](#)" continues to make headlines. While the study was published in the last quarter of 2011, it continues to provide much-needed *current* thought leadership for the renewable energy industry during these economically uncertain times.

Accordingly, subsequent to the introduction of the Bloomberg study, the nation's leading renewable energy publications continue to report and analyze the study's findings. The following are a sample of the publications that featured the study's results:

- [Renewable Energy World](#)
- [North American Wind Power](#)
- [Solar Industry Magazine](#)
- [Triple Pundit](#)

In addition, [Tim Kemper](#), leader of Reznick Group's renewable energy practice, continues to be in high demand for providing thought leadership guidance in the renewable energy arena. Kemper has provided numerous interviews explaining the study's findings and discussing the comparative advantages of various tax equity structures. A [complete listing](#) of the various interviews and publications analyzing the study's findings, can be found on the Reznick Group website.

In addition to tax equity structures, more specifically, the study addressed:

- The availability of tax equity in 2012 in light of the expiring Production Tax Credit (PTC)
- Identifying, attracting and structuring tax equity to optimize return on investment
- Key features of successful offtake agreements
- Pricing and coverage of insurable risks
